

One coverage week stores the measured market

This contract follows the hosted acceptance reading. One calendar week stores the measured coverage. A missing market is not added. This is not a census. The fuel gauge is unchanged. Green does not send. Delivery remains NOT_SENT.

The stored week key is coverage-week-1. Panama City has 1 qualified slice. Fuel is SHORTAGE. Census is No. Slices changed is No. Delivery remains NOT_SENT.

What was proved

READING	RESULT
Stored slices	Panama City, Panama. Qualified slices 1. Submitted 2. Fuel SHORTAGE. Withheld markets none.
coverage-week-1	Qualified 1. Markets 1. Stored markets Panama City. Fuel SHORTAGE. Census No. Slices changed No. Delivery NOT_SENT.
Same week again	That coverage week is already stored. No market was added. Delivery remains NOT_SENT. The qualified count stayed 1.
Add a missing market	A missing market is not added. None was invented. Panama City stayed the only stored market.

The fuel page still says this sentence. A calendar week is not configured. That sentence was left in place. The week page is the stored measurement.

The operations page is /operations#/week. The contract is docs/architecture/contracts/COVERAGE-WEEK-CONTRACT.md.

Verification

```
dotnet test Bliss.Tests/Bliss.Tests.csproj --verbosity minimal
```

429 passed, 0 failed, 0 skipped. The new proofs are CoverageWeekTests and CoverageWeekApiTests.

The browser recording shows Panama City, the stored week coverage-week-1, the refusal to store that key again, and the refusal to add a missing market. Nothing was sent.

What this does not authorize

A census of markets, traffic, or advertisers.

Adding a market that is not already a stored qualified slice.

Changing the fuel gauge, filling a theoretical slot, or rewriting a recommendation.

A live send, a crawler, or a new subscription.

Hosted acceptance stays unclaimed. Economics remains the only price authority. Delivery remains NOT_SENT.
