

# Subscription ledger and factory budget

This is the first priority contract after Phases 4–29. It persists the subscription register and four factory ceilings on the existing operations console. Bliss hosted acceptance and Economics Phase 9 owner acceptance stay on their own paths. They were not marked complete and they were not restarted here.

A missing cost stays unrecorded. A review is not a purchase. A reached ceiling degrades only that scope. Green does not send. Delivery remains NOT\_SENT.

## What was proved

| Reading                  | Result                                                                                                         |
|--------------------------|----------------------------------------------------------------------------------------------------------------|
| Ten known services       | Stored. Bliss Chapel is FREE_SELF_HOSTED. PostgreSQL has no classification and no cost.                        |
| Missing cost             | “Cost is not recorded. None was invented.”                                                                     |
| Daily ceiling            | Operator supplied 25 USD and recorded spend of 25 USD. Daily degrades. Further spend on that scope is refused. |
| Other scopes             | Monthly, provider, and prospect stay open. No ceiling was invented for them.                                   |
| Incomplete paid proposal | Refused. No audit row. No paid service was added. Nothing was purchased.                                       |
| Delivery                 | NOT_SENT. Green does not send. The ceiling is not an Economics price.                                          |

The page is /operations#/ledger. The contract is docs/architecture/contracts/SUBSCRIPTION-LEDGER-CONTRACT.md.

## Verification

```
dotnet test Bliss.Tests/Bliss.Tests.csproj --verbosity minimal
```

363 passed, 0 failed, 0 skipped. The new proofs are SubscriptionRegisterTests, FactoryBudgetTests, and SubscriptionLedgerApiTests.

The browser recording shows the unrecorded register, the daily ceiling reaching its supplied spend, the other scopes staying open, and the incomplete proposal being refused.

## What this does not authorize

- Hosted Bliss acceptance, including a production database, identity provider, backup, or capacity drill.
- Owner acceptance of Economics Phase 9.
- A new subscription, an enrichment purchase, a crawler, or a live send.
- An invented price, plan, owner, or renewal date.
- The next catalog item. Discovery, contact intelligence, hosted scale, and Wedding Planner phases stay closed.

## What remains, in the same order

| Priority                              | Place                                               |
|---------------------------------------|-----------------------------------------------------|
| 1. Bliss hosted acceptance            | Still open. Separate acceptance path.               |
| 2. Economics Phase 9 owner acceptance | Still open. Awaits the owner.                       |
| 4. Ledger and factory budget          | Local proof recorded here.                          |
| 5–13                                  | Not started. Each one still needs its own contract. |

The safest next move remains hosted acceptance and Economics owner acceptance. This report does not open either of them.
