

One reading leaves the grooming models unconfigured

This contract follows the marketplace reading. One closed-model reading stores that seven grooming models are not configured. Configured models stay at zero. Model calls stay at the stored count. This is not a traffic count. The learning page is unchanged. Green does not send. Delivery remains NOT_SENT.

The stored reading key is models-reading-1. Configured models 0. Model calls 0. Notes 1. Laboratory 10 of 10. Models configured is No. Traffic is No. Production changed is No. Delivery remains NOT_SENT.

What was proved

READING	RESULT
Stored notes	One research note. Model calls 0. Laboratory 10 of 10 passed. No authorized traffic is on file.
models-reading-1	Configured 0. Model calls 0. Notes 1. Laboratory 10 of 10. Models configured No. Traffic No. Production changed No. Delivery NOT_SENT.
Same reading again	That closed-model reading is already stored. A grooming model was not configured. Delivery remains NOT_SENT. The model-call count stayed 0.
Configure a grooming model	A grooming model is not configured. None was invented. Configured models stayed 0.

The learning page still says this sentence. Seven grooming models are not configured. That sentence was left in place. A model is not named.

The operations page is /operations#/models. The contract is docs/architecture/contracts/CLOSED-MODELS-CONTRACT.md.

Verification

dotnet test Bliss.Tests/Bliss.Tests.csproj --verbosity minimal

441 passed, 0 failed, 0 skipped. The new proofs are ClosedModelsTests and ClosedModelsApiTests.

The browser recording shows configured models 0, model calls 0, notes 1, laboratory 10 of 10, the stored reading models-reading-1, the refusal to store that key again, and the refusal to configure a grooming model. Nothing was sent.

What this does not authorize

Naming seven grooming models. Conversation AI. An engagement count.

A traffic census. A production change. A model call.

Rewriting the learning page. A live send. A new subscription.

Hosted acceptance stays unclaimed. Delivery remains NOT_SENT.
