

The research note leaves production

This contract follows human creative approval. One research note is appended after the conversation laboratory graduates. No authorized traffic is on file. Bliss hosted acceptance and Economics Phase 9 stay on their own paths. Conversation AI stays closed.

The note does not change production. Research does not control production. A model is not the record. Seven grooming models are not configured. This is not a traffic count. Green does not send. Delivery remains NOT_SENT.

What was proved

Reading	Result
Laboratory	10 of 10 scenarios graduated. Production was not changed. Model calls 0.
Casa Verde	One research note. Authorized traffic no. Production changed no. Behavior changed no. Delivery NOT_SENT. The prospect state stayed DEMONSTRATION_PREPARED.
Same note again	That research note is already recorded. Production was not read again.
Mesa Norte	No research note is recorded for this prospect. Its state stayed DEMONSTRATION_PREPARED.

The operations page is /operations#/learning. The contract is docs/architecture/contracts/LEARNING-LEDGER-CONTRACT.md. Casa Verde and Mesa Norte are fixtures. They are not claims about real businesses.

Verification

```
dotnet test Bliss.Tests/Bliss.Tests.csproj --verbosity minimal
```

408 passed, 0 failed, 0 skipped. The new proofs are LearningLedgerTests and LearningLedgerApiTests.

The browser recording shows the graduated laboratory, the one Casa Verde note, the refusal to append it again, and the empty Mesa Norte reading. Nothing was sent.

What this does not authorize

- An engagement count, a demand map, or commercial memory from invented traffic.
- A model as the system of record, or seven grooming models.
- Research that changes production or behavior.

- A live send or a new subscription.
- Hosted Bliss acceptance or Economics Phase 9.

The next priority stays closed until it has its own contract.
