

The hosted reading leaves acceptance unclaimed

This contract follows the Economics Phase 9 acceptance. One row stores the posture of the process that is running. Hosted acceptance is not claimed. Bliss hosted production stays unfinished.

This reading records the process posture. Hosted acceptance is not claimed. A local database is not a hosted database. An identity provider was not contacted. A backup drill was not run. Green does not send. Delivery remains NOT_SENT.

What was proved

READING	RESULT
This process	Environment Development. Production gates Not applied. Hosted database No. Server certificate verified No. Identity provider HTTPS No. Backup declared No. Secrets outside appsettings Yes. Role claims distinct Yes.
hosted-reading-1	Development. Gates Not applied. Hosted acceptance claimed No. Identity contacted No. Backup drill run No. Delivery NOT_SENT.
Same reading again	That hosted reading is already stored. Hosted acceptance was not claimed. Delivery remains NOT_SENT.
Claim hosted acceptance	Hosted acceptance is not on file. None was invented. The stored claim stayed No.

The operations page is /operations#/hosted. The contract is docs/architecture/contracts/HOSTED-ACCEPTANCE-CONTRACT.md. Phase 20 remains the production-posture proof.

Verification

dotnet test Bliss.Tests/Bliss.Tests.csproj --verbosity minimal

424 passed, 0 failed, 0 skipped. The new proofs are HostedAcceptanceTests and HostedAcceptanceApiTests.

The browser recording shows the Development posture, the stored reading, the refusal to store that key again, and the refusal to claim hosted acceptance. Nothing was sent.

What this does not authorize

A dedicated hosted acceptance database, organizational identity tokens, or a hosted backup and restore drill.

Treating satisfied production gates as a finished deployment.

Production capacity, a live send, or a crawler.

A new subscription.

Bliss hosted production stays unfinished. The reading is the posture of this process.
