

Creative Academy autonomous production acceptance ? consolidated report

Date: 2026-10-07

Voyage key: `one-voyage-panama-pharmacy-20261007`

Stored voyage ID: `aae5f1b6-3ee3-4791-a34d-12ea8c083f56`

Recorded at: `2026-10-07T01:06:11.569544Z`

Executive result

The single controlled voyage ran and stopped at the first incomplete acceptance gate.

Result: `BLOCKED`

Creative Academy: `OPEN / PENDING AUTONOMOUS PRODUCTION ACCEPTANCE`

Advertising Real Estate: `OPEN / PENDING COMMERCIAL END-TO-END ACCEPTANCE`

Campaign ready: `false`

Delivery: `NOT\_SENT`

Model calls: `0`

This is the correct result for the current authoritative data. The run did not promote a candidate, invent reference intelligence, call a provider without an eligible reference set, manufacture geometry, substitute a placeholder advertisement, invent cost, or claim human approval.

The voyage does ****not**** prove a finished original advertisement. ACA-8 therefore remains unaccepted.

Controlled campaign input

The acceptance endpoint received only the controlled scenario:

Field	Value
---	---
Fictitious advertiser	Harborlight Pharmacy
City	Panama City
Market	Panama
Niche	pharmacy
Objective	Introduce prescription pickup to local customers
Required Inventory Product	ARE-P01

No Academy reference ID was supplied to the request. Retrieval remained the system's responsibility.

Reference storage and intelligence

Evidence	Recorded result
---	---
Registered reference IDs	50

Files on disk	49
Awaiting file	1 (`ACA-005-V1`, used-car)
Candidate references	50
ACTIVE references	0
ACTIVE references with LEARN	0
ACTIVE references with DO NOT COPY	0
Quality grades	`UNCLASSIFIED`
Provenance / rights	`UNRECORDED`

The owner needs file still has `ACA-LEARN`, `ACA-DO-NOT-COPY`, `ACA-QUALITY`, `ACA-RIGHTS`, and `ACA-ACTIVE` open. The system did not interpret a file upload as review or authorization.

Reference-intelligence status: `REFERENCE\_INTELLIGENCE\_INCOMPLETE`.

Lifecycle and authorization

No reference changed lifecycle during the voyage.

Approved lifecycle remains:

`CANDIDATE ? HUMAN REVIEW ? ALPHA APPROVED ? ACTIVE`

Only `ACTIVE` references are eligible for normal retrieval. Because no reference has an authoritative ACTIVE decision, the run returned:

`NICHE\_REFERENCE\_NOT\_ACTIVE`

Selected references: none.

There are consequently no legitimate retrieval reasons, LEARN notes, or DO-NOT-COPY notes to show for a selected reference. The report exposes those fields rather than filling them.

Quality intelligence

Global Alpha Quality DNA was read as version `GQD-1`:

1. color power
2. tonal contrast
3. lighting craftsmanship
4. highlight brilliance
5. shadow quality
6. dimensional depth
7. foreground/background separation
8. material realism

9. texture fidelity
10. hero dominance
11. visual hierarchy
12. typographic quality
13. screen pop
14. commercial polish
15. Premium Dominant Presence
16. overall reference quality parity

Global Quality DNA alone is not permission to bypass the ACTIVE-reference gate.

Creative reasoning and Brand DNA

Creative reasoning status: `BLOCKED`.

New advertiser Brand DNA status: `NOT\_CREATED`.

The system did not invent a palette, typography direction, imagery direction, concept, headline, CTA, or composition after the reference-intelligence and retrieval gates failed. Therefore no recolored prototype or manually coached substitute was produced.

Provider, model, generation, usage, and cost

Field Recorded result
--- ---
Provider `UNCONFIGURED`
Model configured in runtime defaults `gpt-image-1`
Provider job `NOT_STARTED`
Attempts 0
Model calls 0
Usage none
Cost `UNRECORDED`
Finished creative `NOT_CREATED`

No provider request was made. The earlier OpenAI credential/credit owner need remains open; the pasted temporary key is not stored in git. No cost was inferred from a model name.

Advertising Real Estate preflight

Inventory Product: `ARE-P01`

Lifecycle: `DRAFT`

Named slots: `LEFT\_VERTICAL`, `BOTTOM\_FULL`

Geometry: `GEOMETRY\_UNRECORDED`

Prototype scaled: `false`

Slot width and height are not authoritative, so the system did not recompose or shrink an image. Area and occupancy were not calculated. Creator authorization, availability, device/platform compatibility, Economics pricing, and delivery remain unclaimed.

QA, originality, and review

| Gate | Result | Reason |

|---|---|---|

| Quality QA | `NOT\_RUN` | No finished image exists; no visual score was invented |

| Inventory QA | `BLOCKED` | Width and height are unrecorded |

| Similarity/originality | `HUMAN REVIEW` | No finished brand/headline/face/product exists to compare |

| Brand DNA compliance | `NOT\_RUN` | Brand DNA and finished image do not exist |

| DO-NOT-COPY compliance | `BLOCKED` | No ACTIVE reference has stored DO-NOT-COPY intelligence |

| Human review | `NOT\_REQUESTED` | No finished image exists for review |

| Retry/recompose | none | There was no generation attempt to reject or retry |

Failed attempts were not hidden: there were zero provider attempts. The blocker occurred before generation.

Stored workflow trace

The API persisted this ten-step trace in `CreativeAcceptanceVoyages`:

1. `STORAGE ? RECORDED`
2. `REFERENCE\_INTELLIGENCE ? REFERENCE\_INTELLIGENCE\_INCOMPLETE`
3. `AUTOMATIC\_RETRIEVAL ? NICHE\_REFERENCE\_NOT\_ACTIVE`
4. `CREATIVE\_REASONING ? BLOCKED`
5. `ORIGINAL\_GENERATION ? BLOCKED\_REFERENCE\_GATE`
6. `INVENTORY\_PREFLIGHT ? GEOMETRY\_UNRECORDED`
7. `QUALITY\_QA ? NOT\_RUN`
8. `ORIGINALITY\_QA ? HUMAN REVIEW`
9. `HUMAN\_REVIEW ? NOT\_REQUESTED`
10. `DELIVERY ? NOT\_SENT`

The voyage key is unique and idempotent. Repeating the same request reads the stored report instead of creating a second voyage.

Open blockers

- `ACTIVE\_REFERENCE\_INTELLIGENCE\_REQUIRED`

- `ACTIVE\_REFERENCE\_RETRIEVAL\_REQUIRED`
- `PROVIDER\_CONFIGURATION\_REQUIRED`
- `INVENTORY\_GEOMETRY\_REQUIRED`
- `VISUAL\_QUALITY\_QA\_REQUIRED`
- `HUMAN\_REVIEW\_REQUIRED`
- `USAGE\_COST\_UNRECORDED`

Acceptance matrix

Requested evidence	Outcome
Original campaign brief	Recorded
ACTIVE references available	Not satisfied: 0
Automatic retrieval	Ran; selected none and returned `NICHE\_REFERENCE\_NOT\_ACTIVE`
Retrieval reasons	None can exist without a selected ACTIVE reference
LEARN	Not satisfied: no authorized notes
DO NOT COPY	Not satisfied: no authorized notes
Global Alpha Quality DNA	Recorded as `GQD-1`
New advertiser Brand DNA	Not created after retrieval gate failure
Provider/model/job	Provider unconfigured; model default named; job not started
Generation attempts	0
Finished original advertisement	Not created
Inventory-adapted version	Not created; preflight `GEOMETRY\_UNRECORDED`
Similarity/originality	`HUMAN REVIEW`; no finished creative
Quality QA	Not run
Failures/retries	Reference gate failure recorded; no provider retry
Usage/cost	No usage; cost unrecorded
Human review	Not requested
Workflow/audit trace	Persisted

What is required for the next valid rerun

1. A human reviews the specific acceptance references.
2. The owner supplies and approves their LEARN, DO-NOT-COPY, quality classification, provenance, rights, and ACTIVE lifecycle decisions.
3. The runtime receives a valid image-provider credential and available credits through the secret store.
4. If ARE-P01 is part of acceptance, authoritative width and height are recorded for its named slots. No showcase image is used as geometry.
5. The rerun automatically retrieves the resulting ACTIVE references and records reasons.
6. Only then may the production worker create a new Brand DNA and request a finished image.
7. The finished image must pass quality, Brand DNA, geometry, originality, and DO-NOT-COPY

checks.

8. A human records the final review. Even approval does not imply delivery.

Until those inputs exist, refusing to manufacture the missing evidence is the passing behavior.

Controls reading

A second idempotent reading of the same scenario was stored after the rejection, regression, provenance, and cost controls existed. It is not a second advertisement.

Voyage key: `one-voyage-panama-pharmacy-controls`

Stored voyage ID: `8805204b-a360-408d-a337-4fe2e0583df3`

Recorded at: `2026-10-07T01:36:41.5659903Z`

Result: `BLOCKED`

Regression: `BASELINE\_NOT\_RECORDED`, passed false, 12 named briefs

Rejection: `INVENTORY\_GEOMETRY\_FAILURE` on ARE-P01, positive reference false

Reference assets sent to a provider: false

Stored quality: ACA-001-V1 `UNCLASSIFIED`, model calls 0

Provider job: `BLOCKED\_REFERENCE\_GATE`

Cost: `UNRECORDED`

Model calls: 0

Delivery: `NOT\_SENT`

Trace length: 13, ending in rejection taxonomy, regression suite, provenance and cost, and delivery

ACA-6 and ACA-7 controls added before this PDF

These controls were completed before the consolidated PDF was written. They do not close the voyage.

Rejection taxonomy: the sixteen blueprint codes are stored. Unknown codes are refused. The unrecorded ARE-P01 preflight is stored as `INVENTORY\_GEOMETRY\_FAILURE` on ARE-P01. That rejection is not a positive Academy reference. There is no generated image to reject, so no retry image exists.

Regression suite: RQ-01 through RQ-12 are named. Each baseline asset is `BASELINE\_NOT\_RECORDED`. Each latest run is `BASELINE\_NOT\_RECORDED`. The suite status is `BASELINE\_NOT\_RECORDED` and passed is false. No regression image was generated. An HTTP 200 is not a pass.

Provenance: source, provider, ownership, approval history, permitted internal use, restrictions, dates, and approving authority are `UNRECORDED` on the candidate references. Permitted provider use is `NOT\_AUTHORIZED`. Reference assets sent to a provider: No.

Generation job record: when a configured provider creates a draft, the job stores provider and model. Cost status remains `UNRECORDED` unless a real cost is returned. No cost was invented. The live acceptance voyage made no generation request.

Stored quality: ACA-001-V1 remains `UNCLASSIFIED`. Reading it twice records model calls 0 both times. Grades were not invented by a model.

ACA-6, ACA-7, and ACA-8 remain unaccepted.
